How the Portal Works:

The 7 Point Payment Portal is a web based software solution that enables your customers to retrieve invoice or deposit information from your scheduling software. The portal then passes the customer to your existing payment gateway (TouchNet®, Authorize.Net®, etc.) where they can pay their amount due via credit/debit card.

After customers complete their secure payment transaction they receive a payment confirmation.

Payment transaction data is automatically recorded back to the scheduling system eliminating the need for staff to re-key data.

Seamless Customer Experience:

As part of a standard invoice email, a link is provided to your 7 Point Payment Portal. Customers can follow this link to arrive at the custom payment portal.

The look and feel of the portal can be customized, including your logo and any messages you'd like to include.

Installation Prerequisites:

Requires an existing payment gateway for processing payments.

The .Net web application can be installed to any existing web server deployed on Microsoft Windows® Server technology.
