What the Connector Does:

The 7 Point Student Org Connector communicates directly with your scheduling database and your student organization database. It retrieves current student group and officer information from your student organization management system and compares it with existing group and contact information in your scheduling software. Appropriate updates are made automatically so that your scheduling database always stays up to date.

Web user accounts can also be automatically created and maintained for student group officers.

Connector Customizations:

The base connector solution synchronizes standard student group and officer information. It is possible to further customize the connector service to capture additional information as required. Please call for details.

Installation Information:

7 Point provides complete installation service and support.

Please contact us to see if your scheduling software is supported.

Service installs to server hosting the scheduling database.

Requires API license for your student organization management system.
