

Payment Page

An integrated credit card payment solution for your scheduling software.

An Improved Customer Experience:

The 7 Point Payment Page is a fully hosted, web based software solution that provides your customers with a branded website to retrieve their personal invoice or deposit information directly from your scheduling software.

After displaying amounts due, the Payment Page routes your customer to your existing payment processor where they can securely pay via credit/debit card.

Once the payment is approved, the Payment Page automatically writes back the transaction information to your scheduling software.

Integrated with Leading Payment Processors:

CyberSource®

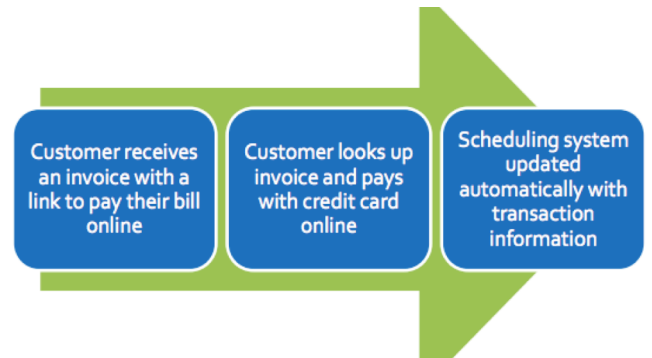

nelnet

CASHNET

Authorize.Net

touchnet®

Use a different payment processor? In most cases, we can still setup the integration. Just let us know.

Easy and affordable to implement:

Our Payment Page is provided on low-cost, flat charge, pay-as-you-go, subscription basis. We provide the hosting, support, training and maintenance. No long-term contracts, no large up-front costs, no per-transaction fees.

Supports Multiple Billing Departments:

With our flexible Payment Page templates, you can configure multiple, branded, payment sites for different departments and even use different payment processors.

Secure Payments:

Our Payment Page complies with the Payment Card Industry Data Security Standard (PCI-DSS). Our solution works without transmitting or storing sensitive cardholder information. Learn more and contact us for a free trial today!
